

ABSTRACT

A method of transferring service settings from a first device to a second device, wherein the first and second devices each have the same predetermined

5 hierarchical data structure, comprising: sending a data transfer request identifying a first portion of the hierarchical data structure from the first device to the second device; copying data stored at the first portion of the hierarchical data structure of the second device from the second device to the first device; storing the copied data at the first portion of the hierarchical data structure of the first

10 device; and using, at the first device, the data stored at the first portion of the hierarchical data structure as settings for a first service.
